

Customer Options Entry

Last updated: May 30, 2022

Summary

Sales relationships with customers define payment terms and payment methods. When a customer's details are entered in Microsoft Dynamics GP two new fields are available for definition of payment via Scheduled Payment and whether or not the collection is to be made electronically. These two new fields are a Scheduled Payment Checkbox and an Electronic Banking checkbox.

Window

Image not found or type unknown

These checkboxes are displayed on the Debtor Maintenance Options window. If a tick appears in the Scheduled Payment checkbox, this customer will default to Scheduled Payment processing within the Sales Order processing system.

If a tick appears in the Electronic Banking checkbox, payments owing from this customer will be collected via an output file to be transmitted to the bank electronically.

The values in the checkboxes will not be available for printing through the standard Microsoft Dynamics GP Debtor List Reports; however, they will be available in reports created through Smartlist Builder and external report writers such as SQL Reporting Services
