Transaction Verify

Last updated: June 22, 2022

This feature enables the ability to verify that all ICP transactions have been properly processed. Transactions can fail to be posted due to several technical issues as well as a few accidental issues. For this reason it is recommended to use this feature to verify that all ICP transactions have been properly processed. If there are transactions that have not been processed, they will appear and the user will be given the option to reprocess these transactions. This feature supports both methods of ICP posting (Trigger Accounts and Alternate Accounts)

Location

Tools >> Utilities >> Financial >> Intercompany Postings >> Transaction Verify

Layout

The Intercompany Analyze Options window allows a user to select the destination companies of the ICP transactions they would like to verify. Various filters are also available to narrow the search. You must select the source company and the all related destination companies for a given transaction for the results to display correctly. For example, if your transaction was from Fabrikam and contained transactions for Canadian Company and Advanced Bank Rec. then you MUST select all three companies for the verification screen to display properly. If you only select 2/3 of the necessary companies involved in a transaction, then the verification screen will show as failed.

The following filters are available:

1. Journal Entry (Number)
2. Posting Date
3. Source Document
4. Intercompany posting method: Account (Trigger), Alternate Account, All, Specific (account number)
5. Intercompany databases

They Include History option allows the user to view the historical transactions for the Intercompany postings.

Once all necessary filters have been selected, the user must click on the Analyze button to move to the next screen, Intercompany Posting Verify. This window displays a list of all records that meet the criteria specified in the Intercompany Analyze Option window. If no filter options were selected in the previous window all Intercompany records from the specified dates will be displayed.

From within the Intercompany Posting Verify screen, many of the filters can once again be selected to further narrow the search results (Note: Intercompany Databases and Include History are two options that are not available in this window). If additional filters are selected then the refresh button must be pressed in order for the filters to be applied.
